VISION

To be a centre of excellence in the field of automobile engineering by providing quality education meeting the ever changing requirements of the industry.

MISSION

- To promote research, consultancy and innovation leading to research publications & patents.
- To strengthen industry institute interaction by collaborating with industries for training, internships and industry expert talks.
- To inculcate ethical, social values and environment awareness by participation in co-curricular and extra-curricular activities.

Program Education objectives (PEOs)

| | |
|-------------|--|
| PEO1 | Engage in design of Automobile systems, tools and application in the field of Automobile Engineering and allied Engineering industries. |
| PEO2 | Apply the knowledge of Automobile Engineering to solve the problems of social, environmental relevance and pursue higher education and research. |
| PEO3 | Work effectively as individuals and as team members in multi-disciplinary projects abiding professional practices. |
| PEO4 | Engage in life- long learning, career enhancement and adopt to change in professional and societal needs. |

PEO to Mission Statement Mapping

| Mission Statements | To promote research, consultancy and innovation leading to research publications & patents. | To strengthen industry institute interaction by collaborating with industries for training, internships, and industry expert talks. | To inculcate ethical, social values and environment awareness by participation in co-curricular and extra-curricular activities. |

Program Outcomes (POs) with Graduate Attributes

| | Graduate Attributes | Program Outcomes (POs) |
|---|-----------------------|---|
| 1 | Engineering Knowledge | Apply the knowledge of mathematics, science, fundamentals, and an engineering specialization to the solution of complex engineering problems related to automobile engineering. |
| 2 | Problem analysis | Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural |

| | | |
|----|-------------------------------------|---|
| | | sciences, and engineering sciences. |
| 3 | Design and Development of Solutions | Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| 4 | Investigation of Problem | Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions in automobile. |
| 5 | Modern Tool usage | Create, select, and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. |
| 6 | Engineer and society | Apply reasoning informed by the contextual knowledge to assess automobile based societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| 7 | Environment and sustainability | Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| 8 | Ethics | Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| 9 | Individual & team work | Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| 10 | Communication | Communicate effectively on complex automobile engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| 11 | Project management and finance | Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |
| 12 | Life-Long Learning | Recognize the need for, and have the preparation and ability to engage in independent and life -long learning in the broadest context of technological change. |

Program Specific Outcomes (PSO): After successful completion of Automobile Engineering program, the graduates will be able to :

PSO 1: Analyse, design and evaluate Automobile components and systems using conventional and/or CAD/ CAM tools.

PSO 2 : Plan, process automation and quality assurance system for manufacturing of given Automobile components and systems.

Course Outcomes: At the end of the Course, the Student will be able to do the following:

| | |
|------------|---|
| CO1 | Use appropriate numerical methods to solve algebraic equations and transcendental equations |
| CO2 | Differentiate the physical problems numerically, evaluate a definite integral numerically and use appropriate numerical methods to solve boundary value problems in partial differential equations. |
| CO3 | Fit a suitable curve by the method of least squares and determine the lines of regression for a set of statistical data and obtain the extremal of a functional. |
| CO4 | Express the periodic functions as Fourier series expansion analytically and numerically. |
| CO5 | Solve the continuous model problems using Fourier transforms. |
| CO6 | Applying Fast Fourier transforms method, solve the discrete model problems. |

| 1. | Numerical Methods-1: Numerical solution of algebraic and transcendental equations: Regula-falsi method and Newton-Raphson method-Problems. Interpolation: Newton's forward and backward formulae for equal intervals, Newton divided difference and Lagrange's formulae for unequal intervals (without proofs)-Problems. | 9 | CO1 |
| 2. | Numerical Methods-2: Numerical Differentiation: Derivatives of first order and second order using Newton's forward differences and Newton's backward differences. Numerical integration: Simpson's 1/3 rd rule, Simpson's 3/8 th rule, Weddle's rule (without proofs)-Problems. Applications: Application of numerical integration to velocity of a particle and volume of solids. Numerical solution of one-dimensional wave equation, heat equation and two-dimensional Laplace's equation. | 9 | CO2 |
| 3. | Statistical Methods and Calculus of Variation: Fitting of the curves of the form $y = a + bx$, $y = a + bx + cx^2$, $y = ae^{bx}$, $y = ax^b$, and $y = ab^x$ by the method of least square-Problems. Correlation and Regression lines - Problems. Variation of a function and functional, variational problems, Euler's equation and Isoperimetric problems. Applications: Minimal surface of revolution and Hanging cable. | 9 | CO3 |
| 4. | Fourier series: Periodic function, Dirichlet's conditions, Fourier series of periodic functions of period 2π and arbitrary period $2l$, half range series-Problems. Applications: Fourier series and half Range Fourier series of periodic square wave, half wave rectifier, full wave rectifier, Saw-tooth wave with graphical representation, practical harmonic analysis-Problems. | 9 | CO4 |
| 5. | Fourier Transforms: Infinite Fourier transforms, Fourier Sine and Cosine transforms, Inverse Fourier sine and cosine transforms. Discrete Fourier Transform and Fast Fourier Transform: Definition of N-Point DFT, problems for 4-points and inverse DFT for four points only. FFT algorithm to compute the Fourier transforms 4-point only. | 9 | CO5, CO6 |

APPENDIX A

Outcome Based Education

Outcome-based education (OBE) is an educational theory that bases each part of an educational system around goals (outcomes). By the end of the educational experience each student should have achieved the goal. There is no specified style of teaching or assessment in OBE; instead classes, opportunities, and assessments should all help students achieve the specified outcomes.

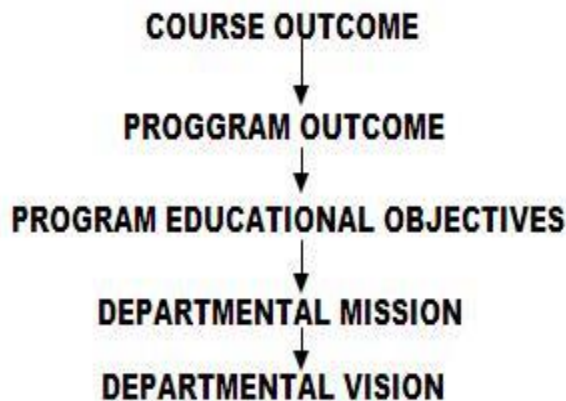

There are three educational Outcomes as defined by the National Board of Accreditation:

Program Educational Objectives: The Educational objectives of an engineering degree program are the statements that describe the expected achievements of graduate in their career and also in particular what the graduates are expected to perform and achieve during the first few years after graduation. [nbaindia.org]

Program Outcomes: What the student would demonstrate upon graduation. Graduate attributes are separately listed in Appendix C

Course Outcome: The specific outcome/s of each course/subject that is a part of the program curriculum. Each subject/course is expected to have a set of Course Outcomes

REVISED BLOOM'S TAXONOMY

Revised Bloom's taxonomy is a classification system used to define and distinguish different levels of human cognition—i.e., thinking, learning, and understanding. Educators have typically used Bloom's taxonomy to inform or guide the development of assessments (tests and other evaluations of student learning), curriculum (units, lessons, projects, and other learning activities), and instructional methods such as questioning strategies.
